

## A. Greg's Workout

time limit per test: 2 seconds  
 memory limit per test: 256 megabytes  
 input: standard input  
 output: standard output

Greg is a beginner bodybuilder. Today the gym coach gave him the training plan. All it had was  $n$  integers  $a_1, a_2, \dots, a_n$ . These numbers mean that Greg needs to do exactly  $n$  exercises today. Besides, Greg should repeat the  $i$ -th in order exercise  $a_i$  times.

Greg now only does three types of exercises: "chest" exercises, "biceps" exercises and "back" exercises. Besides, his training is cyclic, that is, the first exercise he does is a "chest" one, the second one is "biceps", the third one is "back", the fourth one is "chest", the fifth one is "biceps", and so on to the  $n$ -th exercise.

Now Greg wonders, which muscle will get the most exercise during his training. We know that the exercise Greg repeats the maximum number of times, trains the corresponding muscle the most. Help Greg, determine which muscle will get the most training.

### Input

The first line contains integer  $n$  ( $1 \leq n \leq 20$ ). The second line contains  $n$  integers  $a_1, a_2, \dots, a_n$  ( $1 \leq a_i \leq 25$ ) — the number of times Greg repeats the exercises.

### Output

Print word "chest" (without the quotes), if the chest gets the most exercise, "biceps" (without the quotes), if the biceps gets the most exercise and print "back" (without the quotes) if the back gets the most exercise.

It is guaranteed that the input is such that the answer to the problem is **unambiguous**.

biceps	
<b>input</b>	<a href="#">Copy</a>
3 5 1 10	
<b>output</b>	<a href="#">Copy</a>
back	
<b>input</b>	<a href="#">Copy</a>
7 3 3 2 7 9 6 8	
<b>output</b>	<a href="#">Copy</a>
chest	

### Note

### → Attention

Package for this problem was not updated by the problem writer or Codeforces administration after we've upgraded the judging servers. To adjust the time limit constraint, solution execution time will be multiplied by 2. For example, if your solution works for 400 ms on judging servers, then value 800 ms will be displayed and used to determine the verdict.

### Codeforces Round #156 (Div. 2)

Finished

- Tutorial [×](#)

In the first sample Greg does 2 chest, 8 biceps and zero back exercises, so the biceps gets the most exercises.

In the second sample Greg does 5 chest, 1 biceps and 10 back exercises, so the back gets the most exercises.

In the third sample Greg does 18 chest, 12 biceps and 8 back exercises, so the chest gets the most exercise.
